

Daty.ai AI & RELATIONSHIP INTELLIGENCE DISCLOSURE

How Daty.ai generates, interprets and presents Relationship Intelligence

Version 1.0 • Effective date: [insert date]

PURPOSE OF THIS DOCUMENT

This disclosure explains, in plain language, what Daty.ai Relationship Intelligence is intended to do, how its principal intelligence layers contribute to outputs, where AI is used, how users should interpret results, and the important limits of those results. It supplements the Terms of Service and Privacy Policy.

CORE USER MESSAGE

Daty.ai is designed to help you understand patterns, compatibility, mismatch and timing — not to tell you who you must love, what another person will do, or what your future will be. Outputs are computational, interpretive and probabilistic in nature. They are not facts, guarantees or professional advice.

At a glance

- Relationship Intelligence is Daty.ai's framework for helping users interpret relationship-relevant patterns and decisions.
- Compatibility Intelligence explores areas of potential alignment and mismatch rather than declaring two people simply 'compatible' or 'incompatible'.
- CDMA™ is Daty.ai's proprietary Compatibility Dimension Mismatch Analysis framework for examining differences across relevant dimensions and helping explain where friction or divergence may arise.
- Timing Intelligence uses Daty.ai's timing architecture, including the Time Engine / ZeRi framework where applicable, to provide time-related interpretive signals. It does not predict events with certainty.
- AI Interpretation / AI Advisor translates structured outputs and relevant user context into understandable explanations and conversational guidance.
- AI can make mistakes. A confident-sounding answer is not proof that it is correct.
- Daty.ai is not psychological, psychiatric, medical, legal, financial or other professional advice.
- Users remain responsible for their own decisions, communication, boundaries, consent and safety.

1. What Daty.ai Means by Relationship Intelligence

Daty.ai uses the term “Relationship Intelligence” to describe a technology-assisted framework intended to help people understand relationship-relevant patterns, potential compatibility, mismatch, timing and contextual signals in a more structured way.

Relationship Intelligence is decision support, not decision replacement. Daty.ai is designed to add context and explanation to human judgement, not substitute for real communication, lived experience, consent, trust or personal responsibility.

Relationship Intelligence is based on Daty.ai’s proprietary methodology. Unless expressly stated otherwise, it has not been independently validated as a scientific method for predicting specific relationship outcomes.

2. The Daty.ai Intelligence Architecture

Depending on the features you use, Daty.ai combines one or more of the information layers described below. Available features and methodologies may change as the Service develops.

Layer	Function	What it may produce	Important limit
Identity / Natal	Structures selected user inputs into an individual profile/context layer	Profile patterns, attributes or explanatory context	Not an objective diagnosis or complete description of a person
Compatibility	Compares relevant dimensions between two profiles/sets of inputs	Alignment, difference, compatibility or friction signals	Does not determine whether a relationship will succeed
CDMA™	Examines mismatch across defined compatibility dimensions	Mismatch map, areas of divergence and explanatory signals	A proprietary analytical framework, not proof of another person's feelings/intentions
Timing / ZeRi	Applies Daty.ai timing methodology to selected inputs/time periods	Timing signals, supported/challenging periods or contextual	Does not guarantee that an event will or will not occur

Layer	Function	What it may produce	Important limit
		indicators	
AI Interpretation	Converts structured outputs/context into understandable language	Explanations, summaries, conversational answers	Generative AI may hallucinate, omit context or overstate certainty

3. Identity / Natal Intelligence

Daty.ai's identity/profile layer may use user-provided inputs and proprietary processing to generate structured context used by other Daty.ai features. Depending on the product version, this may include elements derived from the Natal Engine and other profile or behavioral inputs.

The Natal Engine draws on Western and BaZi-based interpretive systems together with proprietary computational methods. These frameworks are interpretive and are not established psychological, medical or diagnostic science. The use of software or artificial intelligence does not change their underlying nature.

A generated profile is an interpretive model. It cannot capture the full complexity, history, culture, free will, development or changing circumstances of a human being.

4. Compatibility Intelligence

Compatibility Intelligence compares selected information concerning two people and looks for patterns of alignment, difference and potential friction across dimensions supported by the Daty.ai methodology.

Daty.ai's goal is not to reduce a relationship to one score. Where Daty.ai displays a headline score or indicator it also provides information about the underlying dimensions and the principal limitations of that result.

High compatibility does not mean that a relationship is safe, healthy or guaranteed to succeed. Lower compatibility does not mean that two people should avoid one another or that a relationship cannot work.

5. CDMA™ — Compatibility Dimension Mismatch Analysis

CDMA™ (Compatibility Dimension Mismatch Analysis) is Daty.ai's proprietary framework for analysing where two profiles or sets of supported inputs differ across defined relationship-relevant dimensions.

CDMA™ is intended to move beyond a simplistic match/no-match conclusion. Its purpose is to identify where mismatch may exist, how material a mismatch may be within the Daty.ai model, and how that difference can be explained to the user.

CDMA™ outputs are model-derived indicators. They do not prove conflict, incompatibility, dishonesty, attraction, love, abuse, commitment or another person's private state of mind.

Where Daty.ai publishes methodology or validation information for CDMA™, the public disclosure should clearly distinguish: (a) the proprietary framework; (b) source data/input categories; (c) computational methods; (d) validation/testing performed; and (e) claims that remain hypotheses or interpretive constructs.

6. Timing Intelligence / Time Engine / ZeRi

Timing Intelligence is Daty.ai's framework for presenting time-related relationship or personal context. Where applicable, it uses the Daty.ai Time Engine and proprietary ZeRi methodology together with supported computational processes.

Timing outputs may describe periods as more or less supportive, challenging, relevant or noteworthy within the Daty.ai model. Such language describes the model's interpretation; it does not establish causation and does not predict a real-world event with certainty.

Do not delay urgent action, ignore direct evidence, remain in an unsafe situation, make a major financial/legal/medical decision, or override another person's expressed wishes because a Daty.ai timing output appears favorable or unfavorable.

7. AI Interpretation and AI Advisor

Daty.ai may use generative or other AI systems to explain structured Relationship Intelligence outputs, answer user questions, summarise patterns and make the product easier to understand.

The AI layer is an interpreter, not an oracle. It may use relevant Daty.ai outputs and user-provided context to construct an explanation, but generative AI can produce incorrect, incomplete, fabricated, inconsistent or overly confident content.

The AI Advisor is not a human counsellor, psychologist, therapist, doctor, lawyer or relationship professional and should not be treated as one. Where a third-party AI model contributes to the functionality, Daty.ai remains responsible for providing appropriate user transparency about the Daty.ai experience.

Users should independently evaluate important statements, particularly where an AI answer goes beyond structured Daty.ai output or addresses sensitive real-world circumstances.

8. How Outputs Are Produced and Presented

A Daty.ai output may contain different kinds of information: structured calculations or model outputs, proprietary interpretive frameworks, AI-generated explanations, and user-provided context. Daty.ai distinguishes AI-generated interpretation from verified facts and does not present an AI-generated explanation as independently verified information.

Daty.ai distinguishes calculated or model-derived indicators from AI-generated explanations. An explanation may change between model versions even where the underlying structured result remains the same.

9. Probabilistic and Interpretive Nature of Results

Human behaviour and relationships are affected by factors Daty.ai cannot fully observe or model, including communication, personal history, culture, health, changing circumstances, individual choices and events that occur after an analysis.

Accordingly, Daty.ai outputs are probabilistic and/or interpretive signals within the Daty.ai methodology. They are not deterministic statements of fact.

Percentages, scores, categories or confidence-style indicators must not be interpreted as statistical probabilities of relationship success unless Daty.ai expressly states that a particular metric has that validated statistical meaning.

10. What Daty.ai Does Not Know

Unless a person has directly supplied information through a supported feature, Daty.ai does not know their private thoughts, feelings, intentions or future decisions. It does not know whether someone is truthful, faithful, safe, abusive, attracted to you, ready for commitment or likely to contact you merely from compatibility/timing inputs.

Daty.ai does not present inferred model outputs as a substitute for another person's explicit communication, boundaries or consent.

11. No Professional Advice

Daty.ai is an informational and relationship-intelligence technology service. It does not provide psychological, psychiatric, psychotherapeutic, medical, legal, financial, emergency, diagnostic or other regulated professional advice.

AI Advisor responses are not a diagnosis, treatment plan, legal opinion, professional risk assessment or substitute for a qualified professional who can understand your complete circumstances.

Where a question requires professional judgement, Daty.ai may direct the user to an appropriately qualified professional rather than attempt to simulate professional authority.

12. No Guarantee of Relationship Outcomes

Daty.ai does not guarantee that you will meet a partner, form a relationship, remain in a relationship, reconcile with someone, avoid conflict, improve a relationship or obtain any particular personal or emotional outcome.

Daty.ai also does not guarantee that a person identified as compatible will be interested, available, honest, appropriate or safe.

13. Information About Another Person

Some compatibility features may allow you to provide limited information about another person. You should only provide information you are permitted to provide and only for a supported Daty.ai purpose.

Do not use Daty.ai to create secret dossiers, investigate another person, infer highly sensitive traits, stalk or monitor someone, or override their privacy and boundaries.

An analysis concerning another person is not that person's statement about themselves. Daty.ai-generated descriptions should not be presented to third parties as verified facts about that person.

14. Sensitive Topics, Emotional Distress and Safety

Relationship questions can involve rejection, conflict, abuse, coercion, self-harm, health or other serious circumstances. Daty.ai Relationship Intelligence is not an emergency or crisis service.

If a user describes an immediate threat, violence, self-harm or another urgent safety issue, Daty.ai may provide safety information and direct the user to local emergency or qualified support services. Daty.ai is not able to provide emergency assistance.

No compatibility or timing result should be used to rationalise abuse, coercion, stalking or disregard for consent.

15. AI Transparency

When you use the AI Advisor, we inform you that you are interacting with an AI system at or before your first interaction.

16. Human Oversight and User Control

You can question, disregard or stop using an AI recommendation. Daty.ai does not design AI explanations to pressure you into a particular relationship decision.

Where human review is used for safety, support or quality purposes, access should be limited, logged and governed by the Privacy Policy and internal access controls.

17. Bias, Error and Model Limitations

Any model can reflect limitations in its inputs, assumptions, training data, source frameworks, language coverage or design choices. AI systems may perform differently across languages, cultures, relationship contexts and uncommon situations.

Daty.ai assesses its systems for systematic error, inappropriate certainty, stereotyping and harmful outputs, especially where explanations concern gender, culture, age, nationality, religion, health, sexual orientation or other sensitive characteristics.

A computational or proprietary methodology is not necessarily free from bias.

18. Product Changes and Versioning

Daty.ai may improve its engines, weighting, models, prompts, AI providers and explanatory logic over time. This can cause outputs or explanations to change.

Where a material methodology change affects the interpretation of existing reports, Daty.ai may use version information or another appropriate notice to help users understand why reports generated at different time may differ.

19. Privacy and Data Use

Personal data used by Relationship Intelligence and AI features is governed by the Daty.ai Privacy Policy. The Privacy Policy explains data categories, purposes, legal bases, third-person data, AI providers, retention, international transfers and user rights.

Daty.ai does not permit third-party AI providers to use private consumer prompts or personal data to train their general-purpose AI models.

Daty.ai does not disclose sensitive Relationship Intelligence data to advertising platforms for behavioural targeting.
